- 1 2. The display device of claim 1, wherein the display content selector is located at a position where a player, who plays a game by using the game machine, can actuate the display content selector.

1 3. The display device of claim 1, wherein the display
2 content selector has a user operation prevention device
3 for preventing actuation by a user of the game machine.

1 4. A game machine, comprising:
2 a variable display device which variably displays
3 a plurality of symbols, and has winning lines;
4 a variable display stop device which stops
5 variable display of the variable display device,
6 wherein a bonus is supplied to a player when
7 a predetermined winning combination of symbols is
8 achieved along any one of the winning lines of the
9 variable display device at a time variable displays
10 of the variable display device are stopped; and
11 a display device for providing images with the
12 player, the display device including:
13 an indicator,
14 a recording medium having recorded
15 therein a plurality of display content information
16 items which can be displayed on the indicator,
17 a display content selector which
18 selects display contents to be displayed on the
19 indicator by manual operation, and
20 a display control device, which reads
21 out, from the recording medium, display content
22 information corresponding to the display content

23 selected by the display content selector, and which
24 displays the display contents on the indicator on the
25 basis of the display content information.

1 5. The game machine of claim 4, wherein the variable
2 display stop device is actuated by a player.

1 6. The game machine of claim 4, wherein the display
2 content selector is located at a position where a player,
3 who plays a game by using the game machine, can actuate
4 the display content selector.

1 7. The game machine of claim 4, wherein the display
2 content selector has a user operation prevention device
3 for preventing actuation by a user of the game machine.
